Modula Facility Opens in Lewiston, Maine

October 8, 2015

Modula, an Italian storage manufacturer, held a ribbon-cutting ceremony on September 25 to celebrate its grand opening in Lewiston, Maine.

Earlier this year, APEX provided structural and electrical design services for Modula's major facility upgrade, ensuring a solid foundation to support the manufacturing equipment and optimizing the electrical distribution system. APEX electrical engineers redesigned the distribution system to provide feeders to the new equipment, eliminating the loads for the demolished equipment, and created new buses to support the new equipment in a short period of time to facilitate the installation without delay.

Modula's grand opening was featured in the October Edition of Mainebiz.
