**Modula to introduce Modula One Pick vertical lift module at IMTS**

July 18 2016 [GO TO SUPPLIER'S WEBSITE](#)

July 18, 2016 - "Modula OnePick", a vertical lift module, will be introduced in North America at Chicago's IMTS 2016 in September. Modula OnePick is a product that combines the vertical lift module's technology with an automated system for the picking and replenishment of a single product at the time.

Modula, a manufacturer of automated storage and retrieval systems, selected North America's largest manufacturing exhibit to introduce Modula OnePick, a customizable edition of their original Lift.

The OnePick allows products to be picked and replenished in an automated way in combination with delivery and takeaway conveyor, via the introduction of a secure delivery interface window.

At the operators request the OnePick retrieves the selected item and places it in a retrieval location in the secure delivery window. The unit's design ensures that when the door opens automatically, the operator has access to that requested item.

The OnePick's added customization grants users the option of switching operation modes from standard Vertical Lift with access to SKUs from a full tray, to a restricted access single pick device. This offers users the advantages of two systems combined into the same machine.
