**Vertical Lift Module [New Products]**

Jul 18, 2016

EMAIL SHARE Tweet G+1 Recommend 0 COMMENTS (0)

Modula has introduced Modula OnePick, a highly customizable edition of its original vertical lift module that includes an automated system for the picking or replenishment of a single product at a time, directly from the bay. The OnePick allows products to be picked and replenished in a

fully automated way in combination with delivery and takeaway conveyor, via the introduction of a secure delivery interface window.

At the operator's request the OnePick retrieves the selected item and places it in a retrieval location in the secure delivery window. The unit's design ensures that when the door opens automatically, the operator has access to that requested item. With this feature, inventory is always safe and under control.

The OnePick's added customization gives users the option of switching operation modes from standard vertical lift with access to SKUs from a full tray, to a restricted access single pick device.
